

## PROFESSIONALS WITHOUT PARACHUTES:

### Supporting Students with Fetal Alcohol Spectrum Disorders (FASD)

The Edmonton Regional Learning Consortium (ERLC) and the Learning Network (LN), in collaboration with Dr. Jacqueline Pei and her colleagues, has developed a new PD resource to build understanding about Fetal Alcohol Spectrum Disorder (FASD), its effect on the brain and the impact it can have on student learning.

Strategies for designing classroom instruction and routines to support students with FASD are highlighted.

#### Use this resource to learn about:

- ▶ Prenatal alcohol exposure and the developing brain
- ▶ Brain structure vs brain function
- ▶ The brain and emotional regulation

This resource includes 9 Learning Guides with corresponding video clips designed for use by professional learning communities, learning coaches and teacher leaders or as a self-paced study.
